

Marsh Rat H2O Blind - Installation Instructions

1. Tie either end of the shock cord draw string (black color) into a square knot.
2. Put blind loosely onto Marsh Rat with the draw string underneath the flange edge. It does matter which end of the blind goes to the bow and which goes to stern. Both ends of the blind are the same.
3. With blind sitting loosely on Marsh Rat, go to the untied end of shock cord draw string. Pull on the shock cord until the blind fits snug. Tie another square knot. At this point excess shock cord may be cut off as desired.
4. Tuck the back flap underneath blind.
5. Attach pouches to Velcro along cockpit edge. Adjust forward or back as needed for easy access to gear.
6. Attach doors flaps to Velcro along cockpit edge. There is a right and left door flap. Adjust door flaps forward or back.
